THE ENTERPRISE CLIENT

Microsoft Windows has long been the standard operating system for organizations. However, many organizations are seeking alternatives due to frustrations with forced updates, ads, default software changes, feature modifications, and security concerns from data collection, which disrupt workflow and raise security risks.

In response to these issues, 45Drives has introduced the Enterprise Client - a compact, single-board computer equipped with a pre-installed Linux operating system. With its minimal footprint, it is ideally suited for integrating discreetly into office spaces. This fanless device operates quietly, maintaining a sleek, low-profile design with premium metal construction built in North America.

Optimized for virtualized environments, it efficiently streams applications from corporate servers and supports light office tasks, streaming, and similar functions. Fully open and customizable, it allows enterprises to tailor its use to best fit their specific operational needs.

*Enterprise Client is available with Windows upon customer request.

SYSTEM SPECIFICATIONS

- 2 lbs
